ANALYSIS

ANALYSIS
up-down frequently, with some static or less changed values
smooth (linear) ascent or descent
2021–23 resistance val = 102
2021–22 support val = 96
after 9–22, regular periodic: some static roughly then down-up once then lil change then same from 2022–11 to 2024–01
2021–05 to 2021–09: periodic looking, up & down, equally spaced with smooth transitions
2022–07 to 2022–09: periodic; patterned down & up, looks uniform up and down
2021–10 to 2022–07: trying to go up but as soon as it goes up, it falls and then stays fallen for a while like static or less changed types
2022–11 to 2024–01: no support or resistance, graph is overall ↑ing even if ups and downs are there
2021–01 to 2022–09: b/w a fixed support and resistance
pt. no.10 tells us that from 2021–01 to 2022–09 the ‘close’ value was in a fixed range and didn’t see VOLATILITY
After being stuck in this range, it hit rock bottom in 2022–11 & then started soaring higher

2022–07 to 2022–11 overall descent only, along with ups and downs, net down only

TREND: Bullish: 2022–11 to 2024–01

TREND: Bearish: 2022–07 to 2022–11

2022–11 → rock bottom so I think volatility

CHECK NEXT PAGE ALSO :)

1. up-down frequently, with some static or 'less changed' values
2. Smooth (linear) ascent or descent
3. 2021-23 resistance val = 102.
4. 2021-22 support val = 96
5. after 9-22, regular periodic: some static roughly then down-up once then lil change than same from 2022-11 to 2024-01.
6. 2021-05 to 2021-09: periodic looking, up & down, equally spaced with smooth transitions
7. 2022-07 to 2022-09: periodic, patterned down & up looks uniform up and down.
8. 2021-10 to 2022-07: trying to go up but as soon as it goes up, it falls and then stays fallen for a while like static or less changed types.
9. ~~2023~~ 2022-11 to 2024-01: No support or resistance, graph is overall ↑ing even if ups and downs are there.
10. 2021-01 to 2022-09: b/w a fixed support and resistance.
11. Pt. no. 10 tells us that from 2021-01 to 2022-09 the 'close' value was in a fixed range and didn't see VOLATILITY.
12. After being stuck in this range, it hit rock bottom in 2022-11 & then started soaring high.
13. 2022-07 to 2022-11 overall descent only, along with ups and downs, net down only.
14. TREND: Bullish: 2022-11 to 2024-01
15. TREND: Bearish: 2022-07 to 2022-11
16. 2022-11 → rock bottom so I think volatility.

TRADING LOGIC

FIRST:
Q1 When do I consider the market **bullish enough** to participate?
Ans: 2023-07 bcuz its exactly in the middle and we wud have seen this bullish trend twice first, so we wud know whats happening hence by being in the middle we can think from hypothesis that the market wud go high and according to the bullish trend, the prices might go up hence this is where we shud enter and sell.

Q2 When do I ENTER a trade in a bullish trend?
Ans: when it has just hit a low, then we know since its a trend and bullish hence it has to go up, so just after hitting a low we can enter

Q3 When do I EXIT if I am WRONG?
Ans: as soon as ur wrong, u shud exit so as to prevent any further losses due to uncertainty

Q4 When do I EXIT if I am RIGHT?
Ans: as soon as u hv hit an all time high till that time u shud exit

SECOND:
Ans1: if in a definite amount of candles(lets say 10000) , the price has behaved in a bullish manner then its bullish enough to participate
Or
If the volume of the bullish trades happening is more than the volume moving average, then we can
Or
If in a definite amount of candles, there hasnt been that high relative volatility so its bullish enough

Ans2: if the price of the next trade has gone higher than the previous trade along with volume>VMA and the amount by which the price has gone higher is also increasing and there hasnt been any high relative volatility then we can enter

Ans3: if for a definite amount of candles ur incurring loss on ur trades and u have incurred loss for more than a stipulated amount of cap, then exit

Ans4: when u have hit ur target for the trade, but if u havent hit the target but still a high amount then check if that amount is an all time high and if there has been any recent high relative volatility then exit

THIRD:
Ans1: if the momentum shows the proof for the bullish regime, basically if the tools for momentum show us that the market is following a bullish regime then

Ans2: when the prices have shown an increasing behaviour for persisted time

FOURTH:
Ans1: the market will sustain its bullish behaviour if the force behind this event of the price moving up and increasing persists

Ans2: enter when u r at a local low and that local low shud be higher than the previous local low.
Refined version: when the market is not moving further downward, that is local low

Ans3: when the moment u find out that the price isnt showing momentum persisted higher low behaviour then u exit

Refined: the price hit a low which wasnt higher than the previous low

Ans4: exit when the high the value hit isnt higher than the prev high
FIFTH:

Ans1: the market will sustain the bullish regime bcuz the prices are showing an increasing behaviour and with time theyre moving net up

I. Entry at downward slope
→ Exit when u touch ur entry price and lock no P no L.

II. Entry at "mean reversion portion" while increasing
→ Exit when u reach a pt. after which the downward starts.

FINAL

Ans1: the market will sustain the bullish regime bcuz the prices are showing an increasing behaviour and with time theyre moving net up

Ans2: enter when u r at a local low and that local low shud be higher than the previous local low.
Refined version: when the market is not moving further downward, that is local low

Ans3: when the moment u find out that the price isnt showing momentum persisted higher low behaviour then u exit

Refined: the price hit a low which wasnt higher than the previous low

Ans4: exit when the high the value hit isnt higher than the prev high

IDEATION

THIS IS EXPLOITABLE BCUZ ITS FOLLOWING A PARTICULAR BEHAVIOUR OF HAVING PERIODIC SEGMENTS OF STARTING WITH LESS CHANGE IN PRICES AND THEN HAVING A DOWN AND AN UP AND CONTINUING THIS PATTERN, ITS EXPLOITABLE BCUZ THE LESS INCREASING PHASE CONTINUES TO EMERGE IN A SHARP LOW AND THEN RISE HIGHER AND THIS CONTINUES TO SHOW AN OVERALL NET INCREASING TREND.

THE PERSISTENCE OF THIS PATTERN OVER TIME WILL GIVE US SOME EDGE BCUZ ITS FOLLOWING A PARTICULAR BEHAVIOUR OF HAVING PERIODIC SEGMENTS OF STARTING WITH LESS CHANGE IN PRICES AND THEN HAVING A DOWN AND AN UP AND IF IN HYPOTHESIS, IT CONTINUES THIS PATTERN THEN WE CAN BUILD A STRATEGY AROUND THIS , THE COMPRESSION PHASE TENDS TO THE PERIODIC DOWN-UP MOTION, WHICH OVERALL RESULTS IN A NET BULLISH REGIME , IF IT PERSISTS FOR LONGER THEN THIS PATTERN CAN BE USED AS AN EDGE

WE MAY HAVE AN EDGE CONDITIONAL ON THE PERSISTENCE OF THIS PATTERN OVER TIME. BCUZ ITS FOLLOWING A PARTICULAR BEHAVIOUR OF HAVING PERIODIC SEGMENTS OF STARTING WITH LESS CHANGE IN PRICES AND THEN HAVING A DOWN AND AN UP AND THERE IS A CHANCE OF ENTERING DURING THE LOCAL LOWS CONDITIONAL ON THE FORMATION OF LOCAL LOWS PERIODICALLY , THE COMPRESSION PHASE TENDS TO THE PERIODIC DOWN-UP MOTION, THE PERSISTENCE OF THIS WILL RESULT IN A NET BULLISH REGIME.

IDEATION-LOGIC

LOCAL LOWS:

IF THIS PATTERN PERSISTS THEN THE PATTERN IS:
COMPRESSION PHASE- DECREASING SLOPE- LOCAL LOW- INCREASING SLOPE- LOCAL HIGH

SO AFTER THE COMPRESSION PHASE IS OVER, CHECK THE LOCAL LOW FOR 96x20 CANDLES

—
COMPRESSION:
ONE DAY= 96 CANDLES AND FROM THE GRAPH I INTUITIVELY THOUGHT THE COMPRESSION PHASE IS FOR 30 DAYS SO MY TIME FRAME IS 96x30 CANDLES AND THE CONDITION IS- ITS A COMPRESSION PHASE IF THE DIFFERENCE BETWEEN 2 CONSECUTIVE TRADES HAS AN UPPER LIMIT OF A PARTICULAR VALUE , THE SLOPE OF THESE LINES IN COMPRESSION PHASE IS SAME,

LOCAL LOW:
AFTER THE COMPRESSION PHASE ENDS (IT ENDS WHEN A NEW DECREASING SLOPE STARTS AND STAYS TILL 96X20 CANDLES), SO TILL 96X20 CANDLES HENCEFORTH, THE DECREASING SLOPE WILL BE THERE AND AFTER THIS AMOUNT OF CANDLES THE LOW DETECTED WUD BE LOCAL LOW
AGAIN FROM THE GRAPH I ESTIMATED THE NO. 96X20

—

LOCAL LOW:
WHEN THE “CLOSE” PRICE KEEPS GOING DOWN FOR N (N IS VARIABLE) CANDLES AND THE LOCAL LOW IS ACHIEVED AT THE NTH CANDLE, IF THE (N+1)TH CANDLE’S PRICE > NTH CANDLE’S PRICE THEREAFTER. AFTER VIEWING (N+1)TH CANDLE WE CAN TELL IF THE PRICE AT NTH CANDLE WAS A LOCAL LOW OR NOT

—

LOCAL LOW:
CONDITION ON CLOSE PRICE: CLOSE[T]> CLOSE[T+1]
CHECK THIS CONDITION FOR A LOCAL NEIGHBOURHOOD (20 CANDLES) WHERE THIS CONDITION ON CLOSE PRICE SHUD BE TRUE TILL THE TIPPING POINT, AND THE TIPPING POINT IS THE [T] WHERE THE VALUE OF THE CLOSE PRICE OF THE NEXT CONSECUTIVE CANDLE IS > JUST PREV CANDLE

—

LOCAL LOW:
THE LOCAL LOW IS CALLED THE BINGO CANDLE, THE CONFIRMATION CANDLE IS CALLED THE CON CANDLE
FOR 20 CANDLES BEFORE THE BINGO CANDLE THIS IS FOLLOWED: CLOSE PRICE[T] < CLOSE PRICE[T-1]

THE BINGO CANDLE IS THE MIN(20 CANDLES)
THE CON CANDLE IS THE (BINGO CANDLE+1)TH CANDLE AND FOR THAT THE CLOSE PRICE (CON CANDLE) > CLOSE PRICE(BINGO CANDLE)

—

LOCAL LOW:
THE LOCAL LOW IS CALLED THE BINGO CANDLE, THE CONFIRMATION CANDLE IS CALLED THE CON CANDLE
FOR 20 CANDLES BEFORE THE BINGO CANDLE THIS IS FOLLOWED: CLOSE PRICE[T] < CLOSE PRICE[T-1] THIS CONDITION SHOULD BE TRUE FOR MINIMUM 11 TIMES
THE BINGO CANDLE IS THE MIN(20 CANDLES)
WHERE [T] IS THE INDEX FOR TIME RELATIVE TO THE BINGO CANDLE
THE CON CANDLE IS THE (BINGO CANDLE+1)TH CANDLE AND FOR THAT THE CLOSE PRICE (CON CANDLE) > CLOSE PRICE(BINGO CANDLE)

FINAL-LOGIC

LOCAL LOW:
THE LOCAL LOW IS CALLED THE BINGO CANDLE, THE CONFIRMATION CANDLE IS CALLED THE CON CANDLE
FOR 20 CANDLES BEFORE THE BINGO CANDLE THIS IS FOLLOWED: CLOSE PRICE[T] < CLOSE PRICE[T-1] THIS CONDITION SHOULD BE TRUE FOR MINIMUM 11 TIMES
THE BINGO CANDLE IS THE MIN(20 CANDLES)
WHERE [T] IS THE INDEX FOR TIME RELATIVE TO THE BINGO CANDLE
THE CON CANDLE IS THE (BINGO CANDLE+1)TH CANDLE AND FOR THAT THE CLOSE PRICE (CON CANDLE) > CLOSE PRICE(BINGO CANDLE)

LOCAL HIGH:
THE LOCAL HIGH IS CALLED THE STAR CANDLE, THE CONFIRMATION CANDLE IS CALLED THE ROM CANDLE
FOR 20 CANDLES BEFORE THE STAR CANDLE THIS IS FOLLOWED:
CLOSE PRICE[T] > CLOSE PRICE[T-1], THIS CONDITION SHOULD BE TRUE FOR MINIMUM 11 TIMES
THE STAR CANDLE IS THE MAX(20 CANDLES)
WHERE [T] IS THE INDEX FOR TIME RELATIVE TO THE STAR CANDLE
THE ROM CANDLE IS THE (STAR CANDLE+1)TH CANDLE AND FOR THAT THE CLOSE PRICE (ROM CANDLE) < CLOSE PRICE(STAR CANDLE)

PSEUDO CODE

1. CHECK IF THE MARKET IS BULLISH
   TO CHECK: IF AFTER REGULAR PATTERNS THE HIGH IS HIGHER THAN THE PREVIOUS HIGH AND THE LOW IS HIGHER THAN THE PREV LOW
2. WHEN TO ENTER: ENTER AT A LOCAL LOW, AND THAT LOCAL LOW SHOULD BE HIGHER THAN THE PREVIOUS LOCAL LOW
3. CHECK EXIT CONDITIONS AT EVERY INSTANT AND STARTING FROM AS SOON AS TRADE IS ENTERED: IF WRONG: THE LOCAL LOW IS NOT HIGHER THAN THE PREV LOCAL LOW, EXIT
   IF RIGHT: THE LOCAL HIGH IS NOT HIGHER THAN THE PREV LOCAL HIGH, EXIT
4. CALCULATE RETURNS
5. END
